Abstract (en)

Resilient flooring comprises a layer of material (2) which is resistant to compression and is provided underneath with resiliently compressible support formations (3) at least partially separate from each other. The flooring is constituted by modular elements (1) which can be connected together by gluing and/or jointing and further includes a tread layer (7) applied to the upper surface of the layer of rigid material (2). The preferred application of the flooring is in sports establishments.
