Abstract (en)
[origin: EP0110295A2] A curved spacer frame having a connecting point 1 lying between two corners is described in which, for the later sealing operation after the installation of the spacer frame in an insulating glass pane, depth of sealing over the critical connecting point is provided in that the section of the vertical joint 27 arranged in the outer wall 12 is opened in a controlled manner and a clearance is created under the opening by correspondingly shaping the connecting element (4). <IMAGE>
