Abstract (en)
[origin: EP0110348A1] 1. A lamp frame (1) for screening lamps arranged therein, comprising frame components (10) which extend at right angles to one another and which enclose a frame opening (12) and which at their corners are each connected to one another by a corner connector (2) where each corner connector (2) has two identical coupling arms which are at right angles to one another and which are connected to one another by an intermediate component (21), have fundamentally the same profile as the frame components (10), and extend into said frame components (10), characterised in that the intermediate component (21) is provided with attaching means (210, 2102) for a connecting element (3) and can be covered by a corner lamination, the exterior of which has the same profile as the exterior of the frame components (10).
