Abstract (en)

A grinding roller (2) of a vertical roller mill is removed through an opening (8) in the mill housing (6), for replacement of the roller, by lifting the roller from the mill table (1) by means of an internal cable (11) connected to an hydraulic cylinder (10), fixing an external cable (13) to the roller, and slackening the cable (11) so that the roller swings out through the opening (8) suspended on the cable (13). The steps are reversed upon inserting a new roller into the mill housing.
