Abstract (en)

[origin: EP0110780A1] 1. A method of making thin slabs moulded with a network reinforcement (3), said reinforcement being formed by a plane network of long-limbed elements, of high mechanical strength and of a density substantially equal or smaller than that of the material constituent of the plate (1), the reinforcement (3) being placed on the moulded plate with the material of said plate still in the plastic state, and driven into it, characterized in that the reinforcement network (3) is driven in by a presser (16) forming a plane network of spaced apart ridges (17, 18).
