Abstract (en)
[origin: DE3220215A1] An outsole for a sports shoe, which outsole is preferably of polyurethane or a similar plastics material. The outsole has a shell-shaped inner sole layer (19), which is provided with a profiled bedding and is made from a less dense material, and a flat outer sole layer (18) which is associated substantially only with the bearing surface and is made from material which is denser than the inner layer (19). In the region of the centre of the foot, the outer layer (18) has a trapezoidal recess (20) which is enclosed on all sides by the denser material and through which the less dense material of the inner sole (19) projects to the bearing surface.
