Abstract (en)

An improved adjustable mounting arrangement for mounting a glass door assembly (24) on a door frame for a refrigerated display cabinet. The mounting arrangement includes upper and lower hinge assemblies for providing swinging movement of the door assembly (24) relative to the door frame, with the hinge assembly accommodating adjustment of the hinge axis relative to the door frame for alignment of the door assembly (24) in order to provide effective sealing and enhanced appearance of the display case. The hinge assemblies include upper and lower hinge brackets (46, 48) which are adapted to receive upper and lower hinge pins (42, 44) of the door assembly (24), the brackets (46, 48) being adapted to be attached to frame members (14, 16) of the door frame in different positions for effecting alignment of the door (24).
