Abstract (en)  
[origin: EP0111089A2] 1. Pressurized container for gases, liquids, pasty products or the like, the interior thereof being subdivided into at least two chambers (1, 17) sealed one against the other one and comprising a valve plate (8) common to the chambers, in which one outlet valve (18, 20) for each chamber is inserted communicating with the interior of the associated chamber, said outlet valves being commonly operatable by an operating member (21, 43) displaceable in axial direction in order to open all valves, characterized in that the valves comprise one-piece valve bodies (18, 20) and that the operating member (21) for the uniform opening of several valves is guided with respect to the valve plate (8) axially displaceable, but radially immoveable and secured against axial pivoting.
