Abstract (en)
[origin: WO8304384A1] A fixing device intended for securing substantially plane objects. The construction comprises a plate or the like which is provided with a plurality of vacuum cells (18) arranged in a predetermined, spaced relationship to each other. The vacuum cells can be connected to a common vacuum source via air channels made in the plate. The plate comprises especially a base element (10), in one surface of which the vacuum cells are made with connection to the respective air channels inside said surface, and a covering element (14) in the form of an elastic disc or the like, which has membrane function, an object being placed against the covering element bearing against said one surface of the base element.
