Abstract (en)
[origin: EP0111820A2] The mop cover is intended for wet or moist wiping of floors and the like. It can be fitted onto a mop holder which, for this purpose, has two wings which can be folded onto each other from a locked operating position and each bear at their outer ends, for example, an approximately U-shaped wire bar, with an elongated textile layer bearing the mop tassels and matched to the shape of the wings, which textile layer has on its upper side pouches for receiving the respective ends of the wings. For easy handling of the mop cover for the purposes of squeezing, washing, disinfecting and the like, without touching it by hand, means are provided preferably in the region of the insertion opening of at least one pouch for detachable fastening of a wing, eg. wire bar. <IMAGE>
