Abstract (en)  
[origin: WO8402258A1] A ski boot has a bottom part (1) receiving the foot and provided with a vamp (7) overlapping the instep, as well as with a rod (3) which may pivot when walking, at the bottom part of the boot (1), about a rotation axis (4) situated in the heel area and transversal with respect to the longitudinal direction of the bottom part, between an advance position and a substantially vertical position. To block the rod (3) in the advanced position, a clamping device is provided with a manual bolt lock (9) which bears, in a locked position, on the vamp (7) by means of a pressure bolt (8), a key (41), an excentric (36) or the like, extending vertically with respect to the vamp (7), which secures the rod (3) in an advanced position and releases into an unlocked position both the vamp (7) and the rod (3).
