Abstract (en)

1. An insulating building block of the type in which a layer (20) of insulating material is fixed to a supporting block (10) made of concrete, the support having tenons (3) for co-operating with mortises provided in the insulating layer, characterized in that the outside areas of the support (10) and of the insulating layer (20) are equal, and an opening (6) is made through the support (10) between the tenons (3) the wall (2) and the layer (20), and extends through the building block from top to bottom, with said opening (6) being intended to be filled with concrete.

Abstract (fr)

Parpaing isolant du type dans lequel une couche de matériau isolant est solidarisée avec un bloc support en béton, le support présentant des tenons s'engageant dans des mortaises. Selon l'invention, cet assemblage dégage des alvéoles (6) et des évidements (5) permettant le coulage d'un béton de solidarisation réalisant un clouage horizontal et vertical.
