Abstract (en)
[origin: EP0112420A1] A reminder closure (11) (e.g. for containers (12) for medicinal agents) comprises an outer housing (21) and an inner housing (41, 51) and an indicia means (62) mounted in relatively stationary manner on said inner housing to rotate therewith. Means (23) is provided in the outer housing to allow the indicia means to be viewed through the outer housing. Controllably interengageable abutment means (25, 42) interlink the inner and outer housings to provide a ratchet-type linkage therebetween.
