Abstract (en)
[origin: WO8400319A1] The hair cutting apparatus is provided with an interchangeable blade (33) arranged in a two part casing (1, 16). The blade is located between a row of stationary teeth (2) arranged at the edge of the lower portion (1) of the casing and a row of movable teeth (9) forward or backward with respect to the blade. An articulated support arm (20) carrying a shaving head (26) is secured to the edge of the casing (1, 16) opposite to the edge which carries the blade (33). In a non-operating position, said arm is located in a housing (31) provided in the lower portion (1) of the casing. It may be set in an operating position by pivoting outwardly. When operating the shaving head (26), the casing (1, 16) is used as a handle. Therefore, the apparatus has two functions: it may be used as a razor as well as a hair cutting apparatus.
