Abstract (en)  
[origin: EP0113449A1] 1. Band-shaped workpiece composed of hinges (1), in which every two adjacent hinges (1) are connected positively to one another on the end faces, each hinge having two hinge tabs (2, 3) which at the edges butting against one another are connected pivotably to one another by means of a hinge roll (4) and a hinge wire (5) passing through the workpiece, and which are provided at the free edges with devices for frictional insertion into parts to be connected pivotably to the hinge (1), characterized in that the adjacent individual hinges (1) are connected to one another only by means of the hinge wire (5) which passes through the band-shaped workpiece and which has, in the region of each individual hinge, a cross-section equal to the clear cross-section of the hinge roll (4) and, in the region between adjacent individual hinges, at least up against the end edge (9) of the individual hinge, dimensions which at least partially exceed the clear dimension of the hinge roll (4).
