Abstract (en)
[origin: WO8400396A1] A turnstile suitable for supermarket trolleys which has an endless drive (32) that passes around sprocket wheels (30, 31) to provide a main run (F) and a return run (R). A plurality of spaced arms (20) are coupled to the endless drive (32). Each arm (20) is pivotally mounted on a carriage (41) connected to the endless drive (32) so that upon engagement of the roller (50) with guide means (53, 52, 54) the arm is raised to the horizontal position at or adjacent to the start of the main run (F), held in that position for most of main run (F) and returned to the downward position at or adjacent to the end of the main run.
