Abstract (en)  
[origin: US4517283A] A color-photographic recording material which, in at least one light-sensitive silver halide emulsion layer, an interlayer and/or a protective layer, contains a stabilizer mixture comprising (i) a compound with at least one group of the formula <IMAGE> (I) or a polymer with recurring structural units of the formula I, and (ii) a phenolic antioxidant. Color images obtained by imagewise exposure and development of this color-photographic recording material show good stability to the action of visible and ultraviolet light. With respect to the definitions of the substituents in formula I, reference is made to the description.
