Abstract (en)

[origin: EP0114049A1] 1. A process for producing a container (1) with a body that is wound from board or a similar material and is closed with a lid (7), in the course of which the top edge of the container body (2) is rolled, inwards in one or more stages and is then compressed to form a double flange (4), with one flange (5) extending vertically upwards to form the top end of the container body (2), while the second flange (6) projects radially inwards, wherein the lid (7) is made from metal, can be pulled open along a tear line and also has a flanged rim which is placed on and compressed with the flange (5) that extends vertically upwards.
