Abstract (en)

[origin: EP0114084A2] The invention relates to a system adapted to reverse the sequential position of the operative units of a packaging machinery as a function of the orientation of the processing line and the floor space where the plant is located. The system provides for the use of a coupling plate between the work table and the machine housing, said plate being adapted to be mounted in two specularly symmetrical positions turned 180 degrees in respect of the machine housing.
