Abstract (en)
[origin: EP0114095A2] The container comprises a body, which is a one-piece injection moulding, having a cylindrical wall (12) with a smooth exterior without projections, a mouth (13) and a rim (14). At diametrically opposite positions on the cylindrical wall is provided an inwardly projecting boss (20) having no projection to the exterior. Each boss has a recess (21) open to the exterior and receiving in snap-engagement a spigot (32) on one end of a carrying handle (30) of yoke form. The spigot has annular bearing ribs (33, 34) journaled in the recess and has a locating blip (35) for engaging a depression (23) for releasably locating the handle relative to the body.
