Abstract (en)
[origin: EP0114306A2] The photographic characteristics of a photographic color material can be improved if a layer packet is used which includes, in the indicated order starting from the base and going outwards, at least one red-sensitive gelatin silver halide emulsion layer including cyan dye forming couplers, an intermediate layer including from 0.1 to 1 gram per square meter of a fine light insensitive gelatin silver halide emulsion and at least one green-sensitive gelatin silver halide emulsion layer including magenta-dye forming couplers associated with DIR compounds.
