Abstract (en)  
[origin: US4574557A] An apparatus for storing sheets in which the sheets are inserted between the various layers of a storage band wound onto a storage roller. The storage band, which is wound off a supply roller, is directed between the two rollers in such a way that it forms a horizontal deposit table which is freely accessible on several sides, on which the sheets may be deposited before being drawn onto the storage roller by a corresponding forward run of the band.
