Abstract (en)  
[origin: US4580356A] PCT No. PCT/FR83/00146 Sec. 371 Date Mar. 15, 1984 Sec. 102(e) Date Mar. 15, 1984 PCT Filed Jul. 18, 1983 PCT Pub. No. WO84/00481 PCT Pub. Date Feb. 16, 1984. The removable insole for shoes consists of a thin strip (1) of plastic foam, such as polyolefin foam, in the general shape of the foot. This strip (1) has grooves (6, 7, 8) which are located at the edge of the insole or delimiting zones (3, 4, 5) on the insole which are of different thicknesses, and thus of different densities. The edge of the insole is bevelled (9, 10). The insole (1) gradually becomes permanently deformed on contact with the foot and finally adopts the profile thereof. The grooves (6, 7, 8) allow the insole to change shape more easily.

Abstract (fr)  
La semelle intérieure amovible pour chaussure est constituée d'une mince feuille (1) de mousse plastique, par exemple en polyoléfines, ayant la forme générale du pied. Cette feuille (1) comprend des gorges (6, 7, 8) situées en bordures de la semelle ou délimitant dans celle-ci des zones (3, 4, 5) d'épaisseurs différentes, donc de densités différentes. Les bords de la semelle sont en biseaux (9, 10). La semelle (1) se déforme progressivement et définitivement au contact du pied et en adopte finalement le profil. Les gorges (6, 7, 8) facilitent la déformation.
