Abstract (en)
[origin: WO8400500A1] A self-sustaining water ski, comprising an inflatable float (3) provided with an incorporated foot entry space (6) and with rods, sticks, tubes or laths (4) which are connected as stiffening members in longitudinal direction to the exterior of the bottom portion of the float (3), said foot entry space (6) being formed as a chamber of flexible material accessible from the top of the float (3), the longitudinal walls (2) of said chamber, in operative condition of the float, being in abutting relationship against each other over a substantial portion of the height thereof, but receding relatively to each other towards the bottom portion of the float (3), while the stiffening members (4) in the form of rods, sticks, tubes or laths are attached to the bottom portion of the float by means of eyes (5) affixed at the exterior to said bottom portion of the float (3).
