Abstract (en)
[origin: EP0115371A2] The panel consists of two sorts of components in which one fits into the other. The first sort of component, in the form of a girder, consists of two parallel chords (1, 2) connected by two webs (3, 4) glued slightly set back from the edges of the chords to form a box and two grooves (5, 6) intended for the attaching of one component to a similar neighbouring component by means of components of the second sort consisting of tongues (13). The chords (1, 2) are also connected by internal spacers (7). The tongues (13) can be used as tenons to attach two components of the first sort end to end or to assemble them at right angles. <IMAGE>
