Abstract (en)

Lining method and lining tile provided with ducts, particularly suitable for lining or flooring, comprising a containing shell (1) internally filled with insulating material (i), and provided at the base with a crossed duct (c), wherein the lateral openings of said shell (1 min) corresponding to the openings of said ducts (c), are smaller than the section of said ducts in order to allow the use of a connecting sheath of two adjacent sides (G) or the closing of the duct by means of a cap (T). This type of lining or flooring tile is very useful for obtaining floor ducts for electric, telephonic conductors and the like. The floor thus obtained is easily removable. The method can also be used for lining walls or ceilings.
