Abstract (en)

[origin: WO8400771A1] A thermosetting coating composition with excellent weatherability adapted for use as an automotive topcoat which upon curing forms a hard, glossy, durable coating. The coating composition, which reacts in situ during curing, is characterized in that the composition comprises a mixture of: (A) acrylic copolymer bearing pendant hydroxyl groups and having a number average molecular weight (Mn) of between about 1000-5000; (B) dicarboxylic acid anhydride comprising at least about 50 weight percent of alkyl hexahydrophthalic anhydride; (C) epoxy having one or more epoxide group per molecule and a molecular weight (Mn) of between about 130-1500; and (D) amine-aldehyde crosslinking agent.
