Abstract (en)

[origin: US4566234A] A window frame is made up of frame sides connected together at mitered corner joints. The frame sides are formed of a wood or wood material core with a metal foil laminate on the exterior frame surfaces and a decorative laminate on the interior of the frame surfaces. A thin corrugated metal foil is placed over the mitered corner joints and is soldered to the metal foil laminate. Drain bores in the window frame are lined with thin metal pipes. The window frame incorporates the positive properties of wood, plastics and metal without the negative properties.
