Abstract (en)
[origin: EP0115604A1] 1. Sliding element system like door or window on the furniture- and building-sector having at least one sliding element which can be moved parallel to itself from a closed position, in which it is located in one plane with other structural elements, into an open position, in which it can be moved before or behind the other structural elements, rollers (5 ; 6) being fastened to a least one side of the sliding element, which rollers roll on a running or guide track (8 ; 9 ; 27) displaceable parallel to itself and the element being guided at the other end by means of a guide rail (24), which is also movable parallel to itself, synchronously with and in the same direction as the running or guide track (8 ; 9 ; 27) can be pivoted about an axis extending in its longitudinal direction and, during this pivoting movement, rolls on a mounting part (16) which is at rest relative to the running or guide track (8 ; 9 ; 27).
