Abstract (en)
[origin: ES8500797A1] The invention relates to a device for holding and advancing the stock to be sliced on a cold meat slicing machine. At the free end of a base mounted pivotably on the carriage for the stock to be sliced and slidably displaceable transversely to the direction of displacement of the carriage, there is likewise pivotably mounted a gripper with at least two fingers protruding from its pivot axis, and one curved, pointed needle protruding from each finger. The gripper furthermore comprises a manual lever by means of which the curved needles may be pressed into the stock to be sliced.
