Abstract (en)  
[origin: US4567830A] The impact fuze is as light as possible and protects a time-delay device against preliminary destruction at impact of the projectile in or at the target in order that the projectile can penetrate as deeply as possible into or through a hard target, for instance a concrete wall, before the projectile is detonated. A steel housing is introduced into the interior of a light metal housing of the impact fuze in order to fulfill both of these requirements.
