Abstract (en)
[origin: EP0116354A2] In the pallet, the corner blocks consist at least partially of glazed insulating pressboard, preferably made of a shell of rigid foam material and an inner continuous core (17) of glazed insulating pressboard. They are connected to the cover plate by a hot melt adhesive. In order to stack the pallets, the corner blocks are arranged in alignment with the corner at the one end of the pallet, while, at the other end, the corner blocks have a spacing from one edge of the cover plate, which facing corresponds to the longitudinal or broad side of the corner block and thus two pallets can be stacked in a space-saving manner in such a way that, with mutually facing undersides, the blocks of the one pallet rest on the underside of the other pallet. <IMAGE>
