Abstract (en)  
1. A terminal for a multi-strand conducting cable (2) intended for crimping the multi-strand conductors, and having a structure of the type comprising a tubular head (11) at the inside of which a multi-strand conductor (2) with at least partially its isolating sheath (20) may pass, and a portion made of conducting metal integral with the head (11) and shaped so as to be adapted to cover the bare end of the conductor extending from said head, so that this portion, enclosing said end of the conductor, may be directly used with connectors with resilient clamping, characterized in that it comprises a shape (1) having a rectangular body (10) formed in the shape of a spout and forming said portion, a part having the form of a split crown (11) connected to said body by means of a neck (13), and a tubular part made of plastic material (16) molded over said part to form said head, and in that said body (10) is constructed so as to effect clamping of the bare end of the conductor, inserted in said head so as to extend therefrom and into said spout.

Abstract (fr)  
Embout pour câble conducteur multibrins (2) destiné à sertir les conducteurs multibrins, caractérisé en ce qu'il comprend une forme (1) découpée dans une bande métallique (14) et présentant un corps rectangulaire (10) conformé en goulotte, une tête (11) surmoulée avec une matière plastique (16) et conformée au moins en goulotte, et un col (13) reliant le corps à la tête.
