Abstract (en)
[origin: EP0117167A1] 1. A method of lifting a structure having a substantially horizontal and substantially airtight surface (3), said method being of the type relying on the provision of a closed space (19) beneath the top surface (3) of the structure, termed the thrust surface and contributing to the closing off of said space (19), for the injection of compressed gas, characterized in that the compressed gas is used to provide a lifting force different from the load of the structure to be lifted, said difference being taken up by mechanical pushing or pulling means.
