Abstract (en)
[origin: EP0117500A2] The container closure has a closure cap (2) which can be placed on a container neck (3) and in the bottom (6) of which there is a V- or U-shaped annular groove (4), into which the container neck is immersed in the closure position. A film (9) is arranged at the bottom (6) of the cap, which film bridges the annular groove (4) in the bottom of the cap in such a way that a gap remains free between the film and the bottom of the annular groove. <IMAGE>
