Abstract (en)
[origin: EP0117722A2] A container suitable for perfume and the like has a two part screw-on closure consisting of an inner skirt and an outer cap which are nonrotatably engaged with each other, the closure carrying a stop means for engagement with a corresponding abutment on the container, when container and closure are in a predetermined alignment with each other, the inner skirt providing a sealing means to close the container in a vapour tight fashion over an angle of relative rotation of the skirt on the container of at least 45 DEG up to the position where the container and closure are in alignment.
