Abstract (en)
[origin: EP0117877A1] 1. Element for the transmittal of vibrations in a vibrating or jarring apparatus, characterized in that the element is a laminated body, whereby one layer is structured as a supporting carrier (10) resistant to bending and at least one second layer as perforated sheet (12) mounted force-locked to one outer surface of the supporting carrier, and in that a further layer (15) of a material (14) having rubber elastic and/or vibration absorbing properties is applied to at least the outer surface of the sheet.
