Abstract (en)

[origin: EP0118362A1] 1. Item consisting of plastics material with an interior wooden frame such as in particular a crate or pallet, characterized in that in order to avoid local fissures or cracks in the item under the effect of expansion or swelling of the frame immersed in the item (29, 30, 34), areas are provided to allow expansion of the frame, the said areas being suitably disposed within the volume of plastics material covering the frame and constituted by cavities (47, 48 ; 60, 65 to 69), cut-outs (61, 63), zones filled with compressible material (32, 34) and/or deformation zones (70, 71) locally present between the plastics wall after moulding and cooling, and the frame in position in the item.
