Abstract (en)  
[origin: WO8401229A1] The case (1) of the watch is provided along the periphery thereof (5) with ring-shaped hooking members (6a, 6a', 6b, 6b', 6c, 6c'), said rings being radially arranged with respect to the center (7) of the dial (2) and, therefore, to the center of the watch. A chain (8) is attached with loops (9, 10) at its ends to two (6c, 6c') of said rings and passes through the other rings (6a, 6a', 6b, 6b'), surrounding several times the wrist of the wearer. After having separated the loops (9, 10) from their respective rings, the chain (8) may be arranged differently about the case so that the watch may be hung on the neck. To effect such a change, the chain is fitted with a flat link (13) which may pass through radial slots provided at the periphery of the rings.
