Abstract (en)
[origin: EP0118584A2] This invention is directed toward a unitary, preformed bracket for use in a pipe hanger. The bracket has top and bottom sections joined by a pipe receiving section lying to one side of the top and bottom sections. The top and bottom sections have mounting openings for use in mounting the bracket on a threaded support rod. The pipe receiving section has means for retaining a pipe therein against movement in a direction transverse to the pipe axis. The invention is also directed toward a pipe hanger incorporating the bracket, the hanger including means to securely fix the bracket to the threaded rod.
