Abstract (en)

[origin: EP0118819A2] 1. A container (1) made of lined carton (2) or the like, particularly for fluid matter, preferably for liquids, the container being composed of an originally strip-like, flat cut-out (8) which is formed into a hollow body U-shaped deformation and formation of a concave saddle surface which belongs to a centre portion (9) and is defined by folded edges and by simultaneously raising and bowing the two side portions (10) to the outside, the side portions (10) opposite one another in each case being welded together or sealed with their edges or flanges (11) and a discharge opening being provided in the saddle surface for pouring out the contents of the container, characterized in that at the container (1) end opposite the discharge opening provision is made for a bottom insert (7) which forms a base (3) and the flanged edge (13) of which is joined to the lower edges of the side portions (10) by adhesion or welding.
