Abstract (en)

[origin: WO8401137A1] Hydrofoil device supported by a strut (1) and comprised of a moving assembly articulated along an axis (2) and comprised of a main carrier plane (3) and of a tail unit (4) connected by a fuselage (5), said tail unit being offset in the vertical plane with respect to the main carrier plane. Said tail unit provides a natural stability to the assembly and particularly allows to stabilize the main carrier plane at an immersion depth determined by the offsetting (6). Said hydrofoil is applicable to all fast nautical crafts.
