Abstract (en)
[origin: EP0119314A2] The present invention relates to a re-sealable dispenser-container comprising a main container body made of three impervious sheet-like materials, the peripheries of which are sealed together in a superimposed condition so that two spaces containing materials for cosmetic or toilet use are formed, with at least one opening, a flap having a pressure-sensitive adhesive surface and fixed to the main body at one end thereof to cover the opening, and a non-adhesive member adhered to the adhesive surface and which member is used for closing the opening in order to prevent the adhesive surface from directly contacting the contents.
