Abstract (en)

[origin: EP0119559A2] Device for placing an activated carbon filter (30) in an air current for installation in a frame which is flowed through by the air current and which is delimited towards the inside by a circumferential flange. According to the invention, this device consists of an angle frame (20) which in its external dimensions is adapted to said circumferential flange. On opposite sides of the internal flange (22) of the angle frame (20), there is arranged in each case a filter guide rail (27), and on the filter guide rail (27) there is a device (33, 48, 39) for pressing the inserted filter (30) against the internal flange (22) of the angle frame (20). <IMAGE>
