Abstract (en)

A tamper-proof container has an open top with a lid hinged to one edge of the opening, the lid having locking means fitted to its underside which are cooperable with corresponding means at or near the top of the container the lid being formed in three sections interconnected by hinges parallel to said hinge whereby the said locking means may be engaged by pivoting the various lid sections to their closed position. The container may be formed from an upper and lower portion, the upper portion being in the form of a collar which can be manufactured in a number of different heights, which is permanently fixed on top of the lower portion.
