Abstract (en)  
[origin: EP0119950A1] 1. A plug connector for an electrical apparatus comprising - a plurality of contact elements (4, 4' ... 4\*\*n) which are fixed on a plug casing, where the plug casing consists of a plurality of casing parts (1, 2), characterized in - that the plug casing consists of an upper (2) and a lower casing part (1), where the contact elements (4, 4' ... 4\*\*n) and supply line (3) are secured to the lower casing part (1) and at least one electrical component (22) is fixed on the upper casing part (2), - the upper casing part (2) can be snapped onto the lower casing part (1) and that - in the snapped-together state electrical connections between the terminals of the components (22) in the upper casing part (2) and the contact elements (4, 4' ... 4\*\*n) and/or the supply lines (3) in the lower casing part (1) are established (Figure).
