Abstract (en)

[origin: WO8403663A1] A nucleophilic alkoxyated compound is bridged as a polyurethane by a polyisocyanate derivative or as a polyester by a polyacid derivative. A desensitizing ink for wet offset printing on an acceptor surface of a chemical duplicating set is thus obtained.

Abstract (fr)

Un composé nucléophile alcanoylé est ponté sous forme de polyuréthane par un dérivé polyisocyanate ou sous forme de polyester par un dérivé polyacide. On obtient ainsi une encre désensibilisante pour impression en offset humide sur une surface acceptrice d'un ensemble autocopiant chimique.
