Abstract (en)

This invention relates to a frame for the support of large sun-awning shapers and rollers that houses internally the sliding rollers at the ends of the said rods which can be drawn back together with the awning they subtend. In this way the balcony remains free of all lateral rods, apart from the stiffeners located on the curved part of the supports which constitute the invention. These are characterized by their configuration as "slideways" of varying number and width, for the presence of grip blocks to stop the moving rollers and for the unique type of joint between the section of the frame.
