Abstract (en)
[origin: EP0120283A2] 1. A method of shifting a heat source from a room-heating system to a heater for consumable water where a demand for consumable water takes precedence to room heating, characterized in that the time of a demand for consumable water, i. e., the tapping time, is measured and after a demand for water for consumption a reheating of the storage device for water for consumption is suppressed and the heat source is connected to the room-heating system when the reheating time, i. e., the time for which the heat source (1) has been connected to the storage device (20) for consumable water, has exceeded a predetermined interval of time in which no consumable water has been tapped.
