Abstract (en)
[origin: EP0120315A2] The terminals for loudspeakers consist at present of short strips with solder eyes which contain three double-tabbed riveted solder eyes. It is proposed to fit the strip with only two riveted solder eyes of a design in which the terminal tabs are designed as flat plugs in accordance with DIN 46244. One of these has a standardised width of 4.8 mm, and the other has a standardised width of 6.3 mm. The latter is split by a slot into two tongues each of which forms a flat plug with a standardised width of 2.8 mm. <IMAGE>
